AI Analysis & Repair

This report summarises what the GlassBots toolkit examined on your computer, what it found, and what to do next. Nothing left your machine — your original files were not changed.

Folder checked: C:\GlassBots-Samples\demo-salon
Generated: 30 Sep 2026 at 09:59 — produced entirely on your computer.

We read 5 files that can hold text (documents, notes, settings, code).
We saw but did not read: 1 picture, program or other non-text file.

Your check in one page

2 Passwords or keys in plain files 2 secret-shaped values found and hidden — pattern matches, not verified passwords; some may be ordinary text that looks like a key.	0 EU AI Act gaps 0 duties likely apply to your business with no sign they are done. Plain fixes are listed inside.	1 Items worth a look 1 signs a human should confirm. Details inside.
---	---	---

Health Score: Not assessed

Why no score? A number would only be honest if the checks behind it could verify enough this run — they could not (a partial scan covers even less). GlassBots shows “Not assessed” instead of guessing: no score is not a pass and not a fail. The findings, the EU AI Act guide and the ranked fix list below are what this run can honestly tell you.

Your next step
Move the 2 redacted secret-shaped value(s) into a proper secret store instead of plain files.

What we checked

Folders you picked: C:\GlassBots-Samples\demo-salon. We looked through 6 files and took a private copy of 5 of them for close inspection — with any passwords or keys stripped out before copying. Nothing left your computer.

What we found, in detail

Important — Passwords or keys stored in plain files

Found in 2 of your files.

What this means: Anyone — or any malware — that reaches these files can read them. These are pattern matches, so a human should confirm anything that looks real.

What to do: Move each one into a password manager or your system's secret store, delete the plain copy, then re-run this check to see it gone.

Worth a look — OpenAI API usage

Found in 1 of your files.

In these files: C:\GlassBots-Samples\demo-salon\reply-assistant.py

What this means: Your files show signs that this AI tool is used here. For a business that uses AI made by others, two of the AI Act's points for you are: help your staff build AI literacy (Article 4), and if you publish a realistic AI-made image, video or audio of real people or events, say it's AI-made (Article 50(4)). Telling people they are talking to an AI is the tool maker's duty (Article 50(1)).

What to do: Help the people who use this tool learn what it can and cannot do. Using a chatbot from someone else? Check it tells your customers it's an AI. Publishing a realistic AI-made image, video or audio of real people or events? Say it's AI-made.

Art 4, Art 50(4)

Your files show code built on an AI service. If you offer it or use it under your own name, you may count as its provider (Article 3(3)), and the provider points (Art 50(1) and 50(2)) would then be yours where the tool does those things. Worth confirming your role.

AI tools found on this computer

We looked for AI tools by name in these places. We kept only their names: nothing inside your programs, and no browsing history. For Chrome and Edge add-ons we read each add-on's own description file to find its name. Please confirm each one.

Programs in your Start menu

Found on this computer: ChatGPT. Do you use it for work?

Program folders in your user profile (AppData)

Found on this computer: ChatGPT Desktop. Do you use it for work?

Add-ons in Chrome or Edge

None found by this look-up.

Toolkit

Add-ons in Firefox

None found by this look-up.

EU AI Act Guide

Readiness pointers based on what was found in your scanned folder(s). Article references are pointers only — they show where to look, not a verdict. This is a readiness diagnosis, not legal advice or certification.

Your stated role for this AI system: **Deployer**. Obligations attach to your role (provider and/or deployer), not to usage alone.

If your business uses AI tools made by others and is not a public body or acting for one, Article 49 of the AI Act does not ask you to register them in the EU database.

4	15	0	1
Files checked	Detection rules run	Gaps flagged	Items to review

“Files checked” = every file the 15 pattern checks (known AI tools and frameworks) examined. This is counted separately from the text files copied for close inspection, so the numbers can differ. 1 rule matched and is listed in the findings below: “Gaps flagged” = the FAIL rows; “Items to review” = the REVIEW rows.

Some AI Act points for a business like yours (plain English) — not a full list	What the scan found
Art 4 — AI literacy: people in the business who use AI must understand what it can and cannot do.	to review (1)
Art 50(4) — Deep fakes: if you publish a realistic AI-made image, video or audio of real people or events, say it's AI-made.	to review (1)

How to read these findings — with two examples

Each card is one AI tool or framework we found in your folders. **Important** means a duty likely applies to your business with no sign it is done; **Worth a look** means it looks relevant and a human should confirm. “What to do” is your plain-English next move.

Example 1 — chatbot on a website (Deployer): a shop's website uses a chatbot built by a software company. The scan finds chatbot code in the shop's folder. The card reads Worth a look. Telling visitors they are talking to an AI is the chatbot maker's duty, so the shop checks that the chatbot does this, and helps its staff build AI literacy.

Example 2 — a business that sells its own AI tool (Provider): a planner sells an AI scheduling assistant under its own name. The scan finds its model code. The card reads Worth a look. Fix: make sure the assistant tells the people who use it that they are

Toolkit

dealing with an AI, unless that is obvious (Article 50(1)).

Your next steps

1. Confirm each 'review' item by hand — machine evidence cannot see everything.
 - Open each file named in the evidence column and check the finding is real.
 - Ask your AI tool directly: “where in our setup are you used?” and compare.
2. Re-run this wizard after your changes and compare the two reports side by side.
 - Fix today what the report names, then scan again this week and compare the two reports.
 - Compare what changed in the checked evidence between the two reports.

Dated obligations to be aware of: Article 4 (AI literacy) has applied since 2 Feb 2025; Article 50 (transparency for certain AI systems) applies since 2 Aug 2026.

This is a readiness diagnosis, not legal advice or certification.

Your setup at a glance (Step 1 questionnaire)

Question	Answer
How many AI agents / assistants are you running?	Just one
Where do they live?	This computer
How often do they actually run?	Every day
When something goes wrong, what happens?	I notice quickly
Who fixes them when they misbehave?	Me
How much do you spend monthly on AI subscriptions / APIs?	Under €50
Do you have backups of the agent setup?	No
Do you know what 'done' looks like for each agent task?	In my head
Could someone else take over your setup tomorrow?	With effort
How many different AI tools/subscriptions are in the mix?	2–3
Have you caught an agent doing the wrong thing?	Not yet
Are any tasks still done by hand that agents should do?	A few
Do you have passwords/API keys sitting in plain files?	One or two
Who approves an agent's work before it ships?	Me, always
How long could you tolerate your agents being down?	Not sure
What's the goal for the next 3 months?	Not sure

Analysis ends here. Your Optimise Design Plan follows on the next page.

Toolkit

Your optimise plan

Optimise Design Plan — your agents, tidied

Priority Actions

- 1. Move the 2 redacted secret-shaped value(s) into a proper secret store instead of plain files.
- 2. Re-run the GlassBots Toolkit wizard after your changes and compare the two reports side by side.

Keep improving

Re-run the GlassBots Toolkit wizard after your changes and compare the two reports side by side to see what changed in the checked evidence.

This is the Free Report

Coming with Guard: a check every month, kept so you can see your history and what changed since the last one.
